

Product Data Sheet

Product Name: Dibucaine hydrochloride

Cat. No.: GC35860

Chemical Properties

Cas. No. 61-12-1

SMILES O=C(C1=CC(OCCCC)=NC2=CC=CC=C12)NCCN(CC)CC.Cl

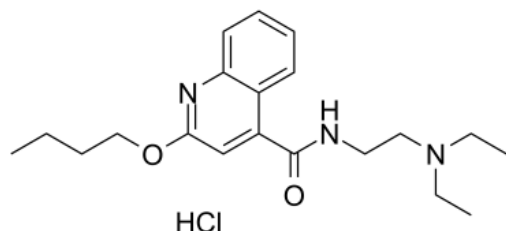

Formula $C_{20}H_{30}ClN_3O_2$ M.Wt 379.92

Solubility Soluble in DMSO Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution: ship with blue ice. All other available size: ship with RT, or blue ice upon request.

Structure

Background

Dibucaine hydrochloride (Cinchocaine hydrochloride) is a local anesthetic of the amide type now generally used for surface anesthesia. Target: Sodium Channel. Dibucaine hydrochloride (Cinchocaine hydrochloride) is an amide local anesthetic. Dibucaine hydrochloride (Cinchocaine hydrochloride) reduced the degradation of BSA-gold complex in the reservosomes, which was not caused either by an inhibition of the whole proteolytic activity of the parasite or by a reduction on the expression levels of cruzipain [1]. Dibucaine hydrochloride (Cinchocaine hydrochloride), a quaternary ammonium compound, inhibited SChE to a minimum within 2 min in a reversible manner. The inhibition was very

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

potent. It had an IC(50) of 5.3 microM with BuTch or 3.8 microM with AcTch. The inhibition was competitive with respect to BuTch with a K(i) of 1.3 microM and a linear-mixed type (competitive/noncompetitive) with respect to AcTch with inhibition constants, K(i) and K(l) of 0.66 and 2.5 microM, respectively. Dibucaine hydrochloride (Cinchocaine hydrochloride) possesses a butoxy side chain that is similar to the butryl group of BuTch and longer by an ethylene group from AcTch [2].
