

Product Data Sheet

Product Name: MS4078

Cat. No.: GC64966

Chemical Properties

Cas. No. 2229036-62-6

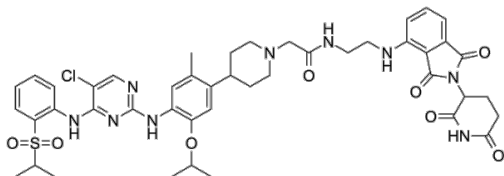

Formula C₄₅H₅₂ClN₉O₈S M.Wt 914.47

Solubility DMSO : 50 mg/mL (54.68 mM; Need ultrasonic) Storage Store at -20°C

General tips For obtaining a higher solubility , please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT , or blue ice upon request.

Structure

Background

MS4078 is an anaplastic lymphoma kinase (ALK) PROTAC (degrader) based on Cereblon ligand, with a K_d of 19 nM for binding affinity to ALK[1].

Caution: Product has not been fully validated for medical applications. For research use only.

Address: 10292 Central Ave. #205, Montclair, CA, USA

Product Data Sheet

MS4078 effectively inhibits cancer cell proliferation. MS4078 (10-3, 10-2.5, 10-2, 10-1.5, 10-1, 10-0.5, 1 μ M; 3 days) concentration-dependently inhibits proliferation of SU-DHL-1 cells with an IC₅₀ of 33 $\pm$ 1 nM. In comparison with SU-DHL-1 cells, the proliferation of NCI-H2228 cells is less sensitive to MS4078 (10-2, 10-1.5, 10-1, 10-0.5, 1, 100.5 μ M; 3 days)[1]. MS4078 potently reduces the ALK fusion protein levels and inhibits the ALK auto-phosphorylation and downstream STAT3 phosphorylation in both SU-DHL-1 and NCI-H2228 cells in a concentration-dependent manner. In SU-DHL-1 cells, MS4078 reduces the NPM-ALK protein levels with impressive DC₅₀ (50% degradation) value of 11 $\pm$ 2 nM after 16-hour treatment. Over 90% of inhibition of both ALK Y1507 and STAT3 Y705 phosphorylation is achieved at the 100 nM concentration. In NCI-H2228 cells, MS4078 reduces the EML4-ALK protein levels with similar DC₅₀ value of 59 $\pm$ 16 nM after 16-hour treatment. At the 100 nM concentration, NCI-H2228 cells reduces more than 90% of EML4-ALK protein levels[1].
