

Product Data Sheet

Product Name: Delpacibart zotadirsen

Cat. No.: GC81526

Chemical Properties

Cas. No. 2929240-20-8

Formula M.Wt

Solubility Storage Store at -80°C, protect from light

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Delpacibart zotadirsen

Background

Delpacibart zotadirsen (Del-zota), an antibody oligonucleotide conjugate (AOC), consists of a monoclonal antibody (Delpacibart) that binds to the transferrin receptor 1 (TfR1) conjugated to a phosphorodiamidate morpholino conjugate (PMO). Delpacibart zotadirsen is designed to deliver phosphorodiamidate morpholino oligomers (PMOs) to skeletal muscle and heart tissue to specifically skip exon 44 of the dystrophin gene and enable production of near-full length dystrophin. Delpacibart zotadirsen is used for the study of myotonic dystrophy type 1 (DM1) [1].

In Vitro, Delpacibart zotadirsen is primarily used in the study of Duchenne muscular dystrophy with

Caution: Product has not been fully validated for medical applications. For research use only.
