

Product Data Sheet

Product Name: JLJ648
Cat. No.: GC78898

Chemical Properties

Cas. No.

Formula $C_{23}H_{17}N_3O_3S$ M.Wt 415.46

Solubility Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

JLJ648 is a Gag-Pol dimerizer with antiviral activity. JLJ648 can inhibit HIV replication and induce infected cell pyroptosis. JLJ648 can be used for the research of infection, such as HIV (human immunodeficiency virus) [1].

In Vitro, JLJ648 (3 days) inhibits HIV-1 replication in MT-2 cells with an EC₅₀ of 1.6 nM [1]. JLJ648 shows low cytotoxicity in MT-2 and THP-1 cells (CC₅₀>100 µM) and a CC₅₀ of 22.9 µM in primary

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

CD4+ T cells^[1]. JLJ648 (17 h) promotes the homodimerization of recombinant HIV-1 RT p66 subunit with an EC₅₀ of 95 nM^[1]. JLJ648 (3-4 h) induces HIV protease-dependent pyroptosis in THP-1 clone14 cells and HIV-infected primary CD4+ T cells, with an EC₅₀ of 86 nM^[1]. JLJ648 (50 µM, 12 h) binds to HIV-1 RT p66 to form two oligomeric structures, subunits in catalytic/structural conformations and "infinity knot"-shaped homotetramer^[1].
