

Product Data Sheet

Product Name: Decamethonium Bromide

Cat. No.: GC16255

Chemical Properties

Cas. No. 541-22-0

Chemical Name trimethyl-[10-(trimethylazaniumyl)decyl]azanium;dibromide

SMILES C[N+](C)(C)CCCCCCCCC[N+](C)(C)C.[Br-].[Br-]

Formula $C_{16}H_{38}N_2 \cdot 2Br$ M.Wt 418.29

Solubility $\geq 20.9145\text{mg/mL}$ in DMSO Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37°C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution: ship with blue ice. All other available size: ship with RT, or blue ice upon request.

Structure

Background

Decamethonium Bromide is a nicotinic AChR partial agonist and neuromuscular blocking agent. Target: nAChR. Decamethonium (Sincurine) is a depolarizing muscle relaxant or neuromuscular blocking agent, and is used in anesthesia to induce paralysis. Decamethonium, which has a short action time, is similar to acetylcholine and acts as a partial agonist of the nicotinic acetylcholine receptor. In the motor endplate, it causes depolarization, preventing further effects to the normal release of acetylcholine from the presynaptic terminal, and therefore preventing the neural stimulus from affecting the muscle. In the process of binding, decamethonium actually activates

Caution: Product has not been fully validated for medical applications. For research use only.

Address: 10292 Central Ave. #205, Montclair, CA, USA

Product Data Sheet

(depolarizes) the motor endplate, but since the decamethonium itself is not degraded, the membrane remains depolarized and unresponsive to normal acetylcholine release [1].
