

Product Data Sheet

Product Name: ZG-2686

Cat. No.: GC79670

Chemical Properties

Cas. No. 1795110-22-3

Formula $C_{13}H_9BrN_4O$

M.Wt 317.14

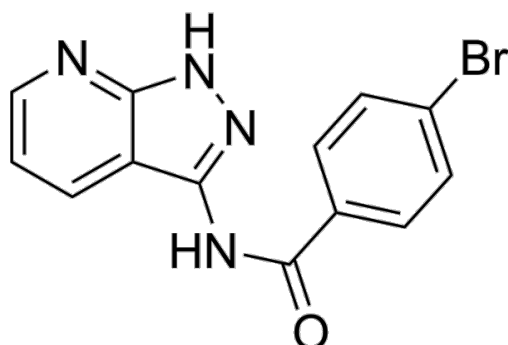

Solubility

Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

ZG-2686 is a potent and selective HIF-2 α agonist with an EC₅₀ of 0.25 μ M. ZG-2686 exhibits selectivity over PHD2. ZG-2686 binds to a specific internal cavity of HIF-2 α , forming hydrogen bonds via structural water molecules, which stabilizes the HIF-2 α / β heterodimer and enhances transcriptional activity. ZG-2686 synergizes with Vadadustat to upregulate HIF-2 α -dependent EPO gene expression both in vitro and in vivo. ZG-2686 can be used for the research of renal anemia [1].

In Vivo, ZG-2686 (10 and 20 mg/kg; i.p.; single dose) shows limited in vivo EPO induction alone but synergizes with Vadadustat to enhance EPO expression in C57BL/6 mice [1].

Caution: Product has not been fully validated for medical applications. For research use only.

Tel: (909) 407-4943 Fax: (626) 353-8530 E-mail: tech@glpbio.com

Address: 10292 Central Ave. #205, Montclair, CA, USA

Product Data Sheet

In Vitro, ZG-2686 demonstrates good in vitro metabolic stability in rat plasma and liver microsomes^[1]. ZG-2686 (10-20 μ M; 12 h) shows a synergistic upregulation of HIF-2 α -dependent EPO mRNA level in Hep3B cells when combined with Vadadustat^[1].
