

Product Data Sheet

Product Name: F3 peptide acetate

Cat. No.: GC81834

Chemical Properties

Cas. No.

Formula $C_{152}H_{263}N_{49}O_{41} \cdot xC_2H_4O_2$ M.Wt 3433.02

Solubility DMSO: 25 mg/mL (Need ultrasonic) Storage Sealed storage, away from moisture

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

F3 peptide acetate is a nucleolin-binding tumor-homing peptide that mediates selective uptake and internalization by tumor cells. F3 peptide acetate is a 31-amino acid fragment of human high mobility group nucleosomal protein 2 (HMGN2). F3 peptide acetate inhibits protein synthesis through

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

ribosome inactivation. F3 peptide acetate targets the tumor vasculature. F3 peptide acetate can serve as an effective ligand to improve the druggability of macromolecular drugs or nanoparticles. F3 peptide acetate is used in research on cancers such as glioblastoma and breast cancer [1] [2].

In Vitro, FITC-F3 peptide acetate (10 nM; 2 h) binds to the 231-H2N cell membrane, internalizes, and translocates to the nucleus and nucleolus, colocalizing with nucleolin[2].
