Structure

Background

Dieldrin is an organochlorine insecticide and an antagonist of GABAA receptors (IC₅₀ = 3.27 × 10⁻⁸ M in rat brain vesicles). It increases cell proliferation and the estrogen receptor transactivation gene response in MCF-7 cells when used at a concentration of 5 × 10⁻⁸ M and inhibits the response to the synthetic androgen R1881 in CHO cells when used at concentration of 20 × 10⁻⁸ M. Dieldrin is toxic to rats with an LD₅₀ value of 46 mg/kg and induces hyperexcitability, seizures, and death. Formulations containing dieldrin have previously been used as insecticides.
