Structure

Background

Icatibant is a synthetic peptide antagonist of the bradykinin B₂ receptor with IC₅₀ and K_i values of 1.07 and 0.798 nM, respectively, in guinea pig ileal cell membranes. It inhibits bradykinin-induced contractions in isolated guinea pig ileum and pulmonary arteries as well as in rat uterus (IC₅₀s = 11, 5.4, and 4.9 nM, respectively). In vivo, icatibant inhibits bronchoconstriction induced by bradykinin in a guinea pig model (ID₅₀s = 13.4 and 31.8 pmol/kg, i.v., for pulmonary resistance and dynamic lung compliance, respectively). Icatibant (30 µg, i.v.) also reduces vascular permeability in the footpad and intestine in a mouse model of hereditary angioedema. Formulations containing icatibant have been
