

Product Data Sheet

Product Name: ADX-47273

Cat. No.: GC10494

Chemical Properties

Cas. No. 851881-60-2

Chemical Name (4-fluorophenyl)-[(3S)-3-[3-(4-fluorophenyl)-1,2,4-oxadiazol-5-yl]piperidin-1-yl]methanone

SMILES C1CC(CN(C1)C(=O)C2=CC=C(C=C2)F)C3=NC(=NO3)C4=CC=C(C=C4)F

Formula $C_{20}H_{17}F_2N_3O_2$ M.Wt 369.36

Solubility DMF: 2 mg/mL, DMSO: 30 mg/mL, DMSO:PBS(pH 7.2) (1:3): 0.25 mg/mL, Ethanol: 2 mg/mL
Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution: ship with blue ice. All other available size: ship with RT, or blue ice upon request.

Structure

Background

ADX-47273 is a potent and selective mGluR5 receptor PAM (positive allosteric modulator), EC₅₀ = 0.17 μm, with no effect on other mGluR subtypes. [1]

The mGluR (metabotropic glutamate receptor) is a group of G-protein coupled receptors and is active

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

through an indirect metabotropic process. It plays a critical role in regulating synaptic plasticity and neural network activity.

In HEK-293 cell expressing rat mGlu5, ADX-showed 9-fold higher response ($EC_{50} = 0.17 \mu\text{M}$) to threshold concentration of glutamate (50 nM) in the fluorometric Ca^{2+} assays, it also shifted mGlu5 receptor glutamate response curve to the left. [1]

In vivo, ADX47273 increased ERK (extracellular signal-regulated kinase) and CREB (cAMP-responsive element-binding protein) phosphorylation in rat hippocampus and prefrontal cortex. In rat and mouse models that sensitive to antipsychotic treatment, ADX47273 decreased rat conditioned avoidance responding (minimal effective dose = 30 mg/kg i.p.) and reduced mouse amphetamine-activated climbing (minimal effective dose = 100 mg/kg i.p.) [1]
