Background

Duloxetine hydrochloride ((S)-Duloxetine hydrochloride) is a serotonin-norepinephrine reuptake inhibitor (SNRI) with a K_i of 4.6 nM, used for treatment of major depressive disorder and generalized anxiety disorder (GAD)[1][2].

Duloxetine ((S)-Duloxetine hydrochloride) (sold under the brand names Cymbalta, Ariclaime, Xeristar, Yentreve, Duzela, Dulane) is a serotonin-norepinephrine reuptake inhibitor (SNRI) manufactured and marketed by Eli Lilly. It is prescribed for major depressive disorder and generalized anxiety disorder (GAD). Duloxetine also has approval for use in osteoarthritis and musculoskeletal pain. Duloxetine failed the US approval for stress urinary incontinence amidst concerns over liver toxicity and suicidal events; however, it was approved for this indication in Europe, where it is recommended as an add-on medication in stress urinary incontinence instead of surgery.
