

Product Data Sheet

Product Name: (S)-Phenylpiracetam

Cat. No.: GC81886

Chemical Properties

Cas. No. 949925-08-0

Formula $C_{12}H_{14}N_2O_2$ M.Wt 218.25

Solubility DMSO: 100 mg/mL (458.19 mM; Need ultrasonic) Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

(S)-Phenylpiracetam ((S)-Carphedon; (S)-Fonturacetam; (S)-MRZ 9547) is an orally active and

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

selective dopamine transporter inhibitor, with $K_i = 56 \mu\text{M}$. (S)-Phenylpiracetam is an isomer of (R)-Phenylpiracetam. (S)-Phenylpiracetam reduces body weight and fat mass gain, decreases plasma leptin and blood glucose levels, and improves glucose tolerance in obese model animals. (S)-Phenylpiracetam can be used for obesity-related research [1].

In Vivo, (S)-Phenylpiracetam (50 mg/kg; p.o.; daily; 12 weeks) reduces body weight gain by 16% in obese Zucker rats, significantly decreases fat mass gain, tends to reduce food intake, and lowers fed-state blood glucose concentrations without affecting insulin concentrations; it also does not affect locomotor activity (distance traveled or speed) in obese Zucker rats [1]. (S)-Phenylpiracetam (50 mg/kg; p.o.; daily; 8 weeks) reduces mean body weight by 26%, decreases fat mass by 45%, lowers hyperleptinemia by 61%, improves glucose tolerance, and reduces hyperglycemia in WD-fed mice without altering plasma insulin concentrations [1]. (S)-Phenylpiracetam (50-100 mg/kg; p.o.; single administration) at a dose of 100 mg/kg results in significantly greater travel distance and speed than the R-Phenylpiracetam treatment group [1].

In Vitro, (S)-Phenylpiracetam competitively inhibits [3H]WIN 35,428 binding to DAT in rat brain striatal membranes with a K_i of $56 \mu\text{M}$ [1].
