

Product Data Sheet

Product Name: IKVAVC acetate

Cat. No.: GC81341

Chemical Properties

Cas. No.

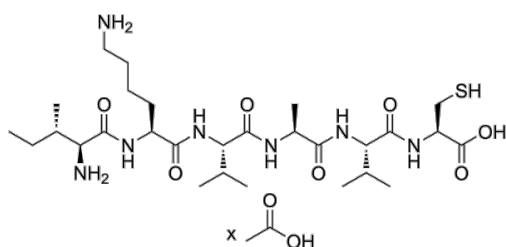

Formula $C_{28}H_{53}N_7O_7S \cdot xC_2H_4O_2$ M.Wt 631.83

Solubility H_2O : 5 mg/mL (Need ultrasonic) Storage Sealed storage, away from moisture

General tips For obtaining a higher solubility , please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT , or blue ice upon request.

Structure

Caution: Product has not been fully validated for medical applications. For research use only.

Tel: (909) 407-4943 Fax: (626) 353-8530 E-mail: tech@glpbio.com

Address: 10292 Central Ave. #205, Montclair, CA, USA

Product Data Sheet

Background

IKVAVC acetate is a derivative peptide of IKVAV with an artificially added cysteine (Cys) at its C-terminus. IKVAVC acetate retains all the biological activities of the original IKVAV, mainly acting as a neural adhesion/differentiation signaling peptide, and is equipped with an engineered linker arm that enables covalent conjugation to molecular materials. IKVAV inhibits the migration and activation of fibroblasts, downregulates the TGF- β 1 signaling pathway and endoplasmic reticulum stress, and promotes nerve repair. IKVAV regulates the phenotype of macrophages, shifting them from the pro-inflammatory M1 type to the pro-reparative M2 type [1] [2] [3].

In Vitro, IKVAVC acetate is covalently conjugated to biomaterials such as hydrogels and dendrimers via chemical reactions. This functionalized material can provide bioactive signals in a long-term, stable manner, construct a bionic microenvironment conducive to nerve regeneration and angiogenesis, and shows application potential in the treatment of diseases such as spinal cord injury[1][2][3].
