

Product Data Sheet

Product Name: MRT-31619

Cat. No.: GC81028

Chemical Properties

Cas. No.

Formula $C_{28}H_{30}N_4O_4$ M.Wt 486.56

Solubility DMSO: 1.25 mg/mL (2.57 mM);
ultrasonic and warming and heat to 60°C) Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

MRT-31619 is a selective CRBN Molecular glue degrader, with an IC_{50} of 14 nM and an EC_{50} of 72 nM. MRT-31619 triggers ubiquitination and proteasomal degradation of CRBN. MRT-31619 serves as a chemical knockout tool for CRBN depletion to evaluate the dependence of other molecular glues on CRBN. MRT-31619 is applicable to the research of CRBN-related disease models [1] [2].

In Vitro, MRT-31619 (1-10 μ M; 1-24 h) potently and selectively degrades CRBN in Jurkat cells: this

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

effect occurs after treatment at 1 μ M for 1 h, 3 h and 24 h, as well as after treatment at 10 μ M for 24 h, without affecting the level of DDB1^[1]. Incubation of purified recombinant CRBN-DDB1 complex with MRT-31619 (10 μ M; 60 min) induces the formation of CRBN-DDB1 dimeric complex^[1]. MRT-31619 induces the formation of CRBN ternary complex, with an EC50 of 72 nM as determined by FIDA assay using purified recombinant CRBN-DDB1 complex^[1]. MRT-31619 efficiently and selectively degrades CRBN via a self-targeting mechanism involving CRBN homodimerization, with a CRBN-binding IC₅₀ of 14 nM and a complex-formation EC50 of 72 nM in Jurkat cells ^[2].
