

Product Data Sheet

Product Name: AZT triphosphate

Cat. No.: GC60616

Chemical Properties

Cas. No. 92586-35-1

SMILES O=C(NC(C(C)=C1)=O)N1[C@H](O2)C[C@H](N=[N+]=[N-])[C@H]2COP(O)(OP(OP(O)(O)=O)(O)=O)=O

Formula $C_{10}H_{16}N_5O_{13}P_3$ M.Wt 507.18

Solubility Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

AZT triphosphate (3'-Azido-3'-deoxythymidine-5'-triphosphate) is a active triphosphate metabolite of Zidovudine (AZT). AZT triphosphate exhibits antiretroviral activity and inhibits replication of HIV. AZT triphosphate also inhibits the DNA polymerase of HBV. AZT triphosphate activates the mitochondria-mediated apoptosis pathway[1][2][3].

Caution: Product has not been fully validated for medical applications. For research use only.

Address: 10292 Central Ave. #205, Montclair, CA, USA

Product Data Sheet

Treatment with 100 μ M Zidovudine (AZT) for 48h disrupts the mitochondrial tubular network via accumulation of AZT triphosphate (AZT-TP) in H9c2 cells. AZT triphosphate accumulation causes downregulation of Opa1 and upregulation of Drp1. AZT triphosphate causes mitochondrial dysfunction, increases the production of cytotoxic reactive oxygen species (ROS), and impairs the balance of the mitochondrial quality control system in H9c2 cell model established from rat embryonic myoblasts[1].
