

Product Data Sheet

Product Name: CCT241533

Cat. No.: GC18053

Chemical Properties

Cas. No. 1262849-73-9

Chemical Name (E)-4-fluoro-6-(4-((4-(2-hydroxypropan-2-yl)pyrrolidin-3-yl)amino)-6,7-dimethoxyquinazolin-2(1H)-ylidene)cyclohexa-2,4-dienone

SMILES CC(C1CNCC1NC2=N/C(NC3=CC(OC)=C(OC)C=C32)=C4C=C(F)C=CC4=O)(O)C

Formula $C_{23}H_{27}FN_4O_4$ M.Wt 442.48

Solubility Soluble in DMSO Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Protocol

Cell experiment [1]:

Cell lines HeLa and HT-29 cells

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

Soluble in DMSO. General tips for obtaining a higher concentration: Please Preparation method warm the tube at 37°C for 10 minutes and/or shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Reaction Conditions 2.2 µmol/L for HeLa cells, 1.7 or 3 µmol/L for HT-29 cells; 24 hrs

Applications In the presence of CCT241533, HeLa (2.2 µmol/L CCT241533) and HT-29 cells (1.7 µmol/L CCT241533) exhibited enhanced sensitivity to AG14447. In HeLa cells, the combination of CCT241533 (3 µmol/L) and Olaparib showed significant potentiation.

Background

CHK2 is a checkpoint kinase involved in the ATM-mediated response to double-strand DNA breaks. Inhibitors of CHK2 may increase the efficacy of genotoxic cancer therapies. CCT241533 has been identified and characterized as a novel CHK2 kinase inhibitor.

In vitro: CCT241533 inhibits CHK2 with an IC₅₀ of 3 nmol/L and shows minimal cross-reactivity against a panel of kinases at 1 mmol/L. CCT241533 did not potentiate the cytotoxicity of a selection of genotoxic agents in several cell lines [1]. Moreover, as the most potent CHK2 inhibitor identified in the series, CCT241533 shows potent selectivity (63-fold) over CHK1 and low hERG inhibition (hERGIC₅₀=22 µM) [2].

In silico: X-ray crystallography confirmed that CCT241533 bound to CHK2 in the ATP pocket. Overall, the binding mode was found to be very highly conserved relative to previous compounds, with all of the key hydrogen bond interactions maintained. The potency gained with CCT241533 therefore

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

appears to be due to the presence of the two methoxy substituents occupying the solvent exposed region of the enzyme, and contributions from the isopropyl alcohol substituent, which may participate in a second intramolecular hydrogen bond to the quinazoline exocyclicNH [2].

Clinical trial: No clinical data are available.
