

Product Data Sheet

Product Name: Auristatin S TFA

Cat. No.: GC81532

Chemical Properties

Cas. No.

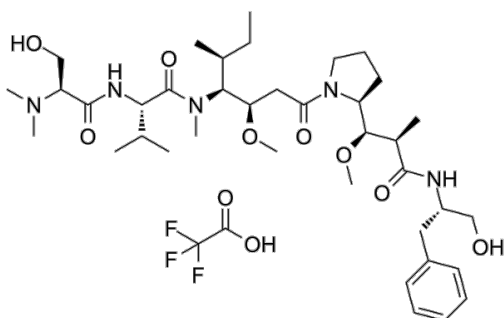

Formula $C_{40}H_{66}F_3N_5O_{10}$ M.Wt 833.97

Solubility DMSO: 100 mg/mL (119.91 mM; Need ultrasonic) Storage Sealed storage, away from moisture

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution: ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

Caution: Product has not been fully validated for medical applications. For research use only.

Address: 10292 Central Ave. #205, Montclair, CA, USA

Product Data Sheet

Auristatin S TFA is a potent Auristatin payload. Auristatin S TFA binds to the vinca-binding site on tubulin, thereby inhibiting microtubule assembly and inducing cell cycle arrest and apoptosis. Auristatin S TFA acts as a cytotoxic component of antibody-drug conjugates (ADCs) and exerts target-specific cytotoxicity against cancer cells. Auristatin S TFA can be used in the research of lymphoma, anaplastic large cell lymphoma and Hodgkin lymphoma [1].

In Vitro, Auristatin S (1.4 μ M; 1 h) TFA competes with FITC-MMAE for binding to tubulin in a cell-free system[1]. Auristatin S TFA has a LogD value of 1.6, exhibiting lower hydrophobicity and cell permeability compared with MMAE[1]. Auristatin S (96 h) TFA exerts in vitro cytotoxic effects in lymphoma cell lines (DEL, Karpas299, KarpasBVR, L540cy, etc.), with a mean IC₅₀ value of 20 nM[1]. Auristatin S (100 nM; 18-72 h) TFA induces markers of immunogenic cell death (HMGB1 release and ATP release) in MiaPaCa and L540cy cells[1].
