

Product Data Sheet

Product Name: KX2-361

Cat. No.: GC72824

Chemical Properties

Cas. No. 897016-26-1

Formula $C_{24}H_{24}FN_3O_2$ M.Wt 405.46

Solubility DMSO : 10.71 mg/mL (26.41 mM); ultrasonic and warming and heat to 60°C) Storage 4°C, protect from light

General tips For obtaining a higher solubility , please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT , or blue ice upon request.

Structure

Background

KX2-361 (KX-02) is a Src-kinase and tubulin polymerization inhibitor. KX2-361 shows good oral bioavailability and readily crosses the BBB in mice. KX2-361 shows anti-tumor activity and induces apoptosis of Glioblastoma (GBM) cell.

KX2-361 (0-200 nM, 24-72 h) reduces autophosphorylation of Src in GL261 cells[1]. KX2-361 (0-270 nM) promotes cell cycle arrest at the G2/M phase in U87 cells. Note the dose dependent effect and

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

virtual complete arrest at 270 nM[1]. KX2-361 (0-800 nM) induces apoptosis of U87, GL261 and T98G cell lines[1]. KX2-361 (5 μ M) inhibits the in vitro assembly of tubulin polymers[1].

KX2-361 significantly delays progression of orthotopic GL261 brain tumors and produces long-term survival[1]. KX2-361 demonstrates appreciable brain penetration when dosed orally to mice (20 mg/kg), with a brain Cmax of 4025 $\pm$ 319 ng/g observed 15 min post-dosing and an overall exposure (AUClast) of 5044 $\pm$ 355 h ng/g[1].
