

Product Data Sheet

Product Name: ATX-012

Cat. No.: GC79710

Chemical Properties

Cas. No. 1777792-44-5

Formula $C_{42}H_{78}N_2O_5S$

M.Wt 723.14

Solubility

Storage Store at -20°C

General tips For obtaining a higher solubility, please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT, or blue ice upon request.

Structure

Background

ATX-012 is an ionizable cationic lipid for the assembly of mRNA -delivering lipid nanoparticles (LNPs). ATX-012 blends with helper lipids, cholesterol and PEG-lipid conjugates to form mRNA -containing nanocarriers, which support efficient cellular internalization and the generation of functional proteins including CFTR. ATX-012 constitutes the vital building block of LNPs applied in cystic fibrosis-related biological studies [1].

In Vivo, ATX-012 (intratracheal administration)-formulated LNPs deliver mRNA to mouse lung epithelial cells and drive protein expression throughout large and small airways[1]. ATX-012 (1

Caution: Product has not been fully validated for medical applications. For research use only.

Product Data Sheet

mg/kg; intranasal administration; once daily for two days)-based LNPs loaded with hCFTR mRNA restore functional chloride channel activity in CFTR knockout mice^[1].

In Vitro, ATX-012 can form LNPs featuring high mRNA encapsulation efficiency (> 95%) and a small particle size ranging from 70 to 90 nm, and such LNPs achieve efficient mRNA delivery into lung epithelial cells in vitro and in vivo^[1].
