

Product Data Sheet

Product Name: ELND 006

Cat. No.: GC74087

Chemical Properties

Cas. No. 1333990-84-3

Formula $C_{20}H_{14}F_5N_3O_2S$ M.Wt 455.4

Solubility DMSO : 50 mg/mL (109.79 mM);
Need ultrasonic and warming) Storage -20°C, sealed storage, away from moisture

General tips For obtaining a higher solubility , please warm the tube at 37 °C and shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.

Shipping Condition Evaluation sample solution : ship with blue ice All other available size: ship with RT , or blue ice upon request.

Structure

Background

ELND 006 (Compound 30) is a metabolically stable γ -secretase inhibitor designed to selectively inhibit amyloid beta ($A\beta$) generation while sparing Notch signaling. It was developed through a synthetic strategy emphasizing diversity and chirality. ELND 006, along with its analog ELND007 (Compound 34), progressed into human clinical trials. In preclinical studies, both compounds demonstrated effective reduction of $A\beta$ levels in vitro and in vivo. Comparisons with other γ -secretase inhibitors like Semagacestat, Begacestat, and Avagacestat underscored their potency and specificity in lowering $A\beta$ levels in cerebrospinal fluid (CSF) of healthy human volunteers, suggesting potential

Caution: Product has not been fully validated for medical applications. For research use only.
