Structure

Background

Sancycline is a semi-synthetic tetracycline antibiotic that is more active than tetracycline against 339 strains of anaerobic bacteria (average MIC₉₀s = 1 and 32 µg/ml, respectively).^{1,2} Sancycline is active against tetracycline-resistant *E. coli*, *S. aureus*, and *E. faecalis* strains with MICs ranging from 0.06 to 1 µg/ml.³ In vivo, sancycline is active against *S. aureus* in mice with ED₅₀ values of 0.46 and 0.6 mg/kg for intravenous and subcutaneous administration, respectively.
